

CONTRACTOR TRAINING

Standard GEA Screw Compressor Startup

- Fully certifies and trains technicians
- Introduces and familiarizes students with the latest compressor package technology & components
- Classroom training includes hands-on instruction
- Certification covers the technician for two years

Training Program Overview

The purpose of this class is to fully train and certify technicians to perform standard GEA screw compressor package startups. Classes are held at GEA's North America headquarters campus in York, Pennsylvania. This four-day course covers procedures and documentation and features hands-on instruction.

The participant will be introduced to and familiarized with the latest package components and technology, including the GEA Omni control panel and GEA IntelliSOC.

Certification

Only certified technicians are authorized for starting standard GEA screw compressor packages; otherwise, the warranty will be voided. Recertification is required every two years and covers the individual technician attending the course (not the company). Certified technicians receive, via e-mail, the same updated service bulletins and documents as GEA service personnel.

Course Information

In order to provide each student with direct access to the trainer, allow an immersive hands-on experience and ensure individualized attention, each course is limited to twelve participants. Required items for this four-day class include:

- Completed registration form (obtain from GEA trainer) and three-week advance signup with purchase order
- Laptop computer
- Basic computer/technology skills
